About Trademark

Corporation names and product names are the registered trademarks or commodity names of the corporation.

- * EPSON and ESC/POS are the registered trademarks of Seiko Epson Corporation.
- * Windows is a registered trademark of Microsoft Corporation.

Warnings, Cautions, and Notes

Pay attention to the following promises when using this manual:

Warning:

Warnings must be followed carefully to avoid bodily injury.

Caution:

Cautions must be observed to avoid damage to your equipment.

Note:

Notes contain important information and useful tips on the operation of your printer.

Important Safety Instructions

Read all of these instructions carefully and thoroughly and save them for later reference. The unauthorized operation would lead to malfunction or accident. Manufacturers have no responsibilities for the problems which are led by unauthorized operations.

- 1. Follow all warnings and instructions in the manual as well as marked on the product.
- 2. Unplug this product from the power outlet before cleaning. Do not use the chemicals like alcohol to clean the printer.
- 3. Do not use this product where is easy to get wet.
- 4. Do not place this product on an unstable cart, stand or table. The product may fall, causing serious damage to you or to the product.
- 5. Slots and openings on the cabinet and the back or bottom are provided for air ventilation. To ensure reliable operation of the product and to protect it from overheating, do not block or cover these openings. And do not place the printer on a bed, sofa, rug or other similar surface in case of blocking the openings. This product should not be placed in crowded environment unless proper ventilation is provided.
- 6. This product should never be placed near or over a radiator or heat origin, and should avoid of direct sunshine.
- 7. Do not locate this product where the cord will be stepped on. When the cord or the plug is mangled, please stop using and get a new one replaced. Make sure the old one is far away from the printer, so it can avoid someone who does not know the inside story getting damaged.
- 8. Only the AC adapter supplied by our company can be used, or else, manufacturer will not answer for any problems which are led by using unauthorized AC adapter.
- 9. Do not use in locations subject to high humidity or dust levels.
- 10. Never push objects of any kind into this product through cabinet slots as they may touch dangerous voltage dots or short out parts.
- 11. Don't remove the printer's out-cover and repair the printer yourself. When needed, call or take it to the professional.
- 12. If there are any liquid accidentally splashed into the product, or printer is exposed to rain or water, please remove the plug immediately, and send it to a professional for repair.
- 13. To ensure safety, please unplug this product prior to leave it unused for an extended period. The wall outlet you plan to connect to should be nearby and unobstructed.
- 14. This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference.
- (2) This device must accept any interference received, including interference that may cause undesired operation.

The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

- 15. Unplug this product from the power outlet and leave servicing to qualified service personnel under the following conditions:
 - A. When the power cord or plug is damaged or frayed.
 - B. If liquid has been spilled into the product.
 - C. If the product has been exposed to rain or water.
 - D. If the product does not operate normally when the operating instructions are followed.
 - E. If the product has been dropped or the cabinet has been damaged.
 - F. If the product exhibits a distinct change in performance, it indicates a need for service.

Notice: The contents of this manual are subject to change without notice.

*All the parts of the printer can be recycled. When it is abandoned, we can call it back freely. Please contact us when you abandon it.

Chapter 1 Overview

1.1 Model Information

EC-PM-530B (Mini Receipt Printer) is developed by our corporation in order to fulfill different requirements and using environments. EC-PM-530B series printers can be configured with parallel interface, USB interface, USB interface + serial interface, USB interface + Ethernet interface, USB interface + Bluetooth, Wi-Fi interface or USB interface + Wi-Fi.

Interface:

EC-PM-530B series products can be equipped with a cash drawer interface, you can choose one of the following data interfaces when purchasing this product:

- EC-PM-530B(D) denotes Parallel interface
- EC-PM-530B(U) denotes USB interface
- EC-PM-530B(US) denotes USB interface + Serial interface
- EC-PM-530B(UE) denotes USB interface + Ethernet interface
- EC-PM-530B(USE) denotes USB interface + Serial interface + Ethernet interface
- EC-PM-530B(B) denotes USB interface + Bluetooth
- EC-PM-530B(W) denotes Wi-Fi interface

Note: Please contact the local dealer to change the interface with added expense if needed.

1.2 Application

- Embedded installation and preprinting common bill printing market
- Embedded installation and duplex-sheet common bill printing market
- · Can be applied to tax-controlled cash register for invoice printing
- Can be applied to electronic billing machine for invoice printing
- Can be applied to self-service terminal for invoice printing or applied to other preprinting bill printing

1.3 Main Parts of the Printer

Chapter 2 Printer Installation

2.1 Unpacking and Checking

Check the following items in the package, if any of these items is missing, please contact your dealer. (As Figure 2-1 shows)

Note: 1. Models with Bluetooth and Wi-Fi are not equipped with interface cable. 2. You could choose the double colors ribbon cartridge.

2.2 Removing the Protective Materials

- 1. Open the packing box, take out the printer.
- 2. Save all the packing materials so that they can be used when transporting the printer in the future.

2.3 Connecting to Computer or Other Equipment

This printer can be equipped with one cash drawer interface and a data interface (you can select parallel interface, USB interface, USB interface, USB interface + Ethernet interface, USB interface + Ethernet interface, USB interface + Bluetooth or Wi-Fi interface). (Please take the specific interface as standard.) Connect the printer to the computer with correct cable.

Caution: Before connecting or disconnecting the cash drawer interface, parallel interface or serial interface, you should make sure that the power of the printer is turned off. Only after tightening the cable could you turn on the printer, or else, it may damage the printer.

2.3.1 Connecting the Cash Drawer Cable

Make sure the printer is turned off. Plug one end of the cable into the cash drawer interface of the printer and the other end to cash drawer. (Shown as figure 2-2)

Figure 2-2 Connecting the cash drawer cable

Note: You must use the proper cash drawer. Manufacturer will not honor warranty when using improper cash drawer.

2.3.2 Connecting the Parallel Cable

1. Make sure that the computer and the printer are both turned off, connect the parallel cable to the parallel interface of the printer, and squeeze the wire clips on both sides of the connector to make the cable fixed. (As shown in Figure 2-3)

Figure 2-3 Connecting the parallel cable

2. Connect the other end of the cable to the computer's parallel interface, and tighten the screws on both sides to make the cable fixed.

2.3.3 Connecting the USB Cable

- 1. Plug the A end of USB cable (flat shape) into the computer's USB interface connector.
- 2. Plug the B end of USB cable (square shape) into the printer's USB interface connector. (As shown in figure 2-4)

Note: Do not impact the plug after connecting the USB cable.

Figure 2-4 Connecting the USB cable

2.3.4 Connecting the Serial Cable

1. Make sure that the computer and the printer are both turned off, connect the serial cable to the serial interface of the printer and tighten the screws on both sides to make the cable fixed. (As shown in Figure 2-5)

Figure 2-5 Connecting the serial cable

2. Connect the other end of the cable to the computer's serial interface and tighten the screws on both sides to make the cable fixed.

2.3.5 Connecting the Ethernet Cable

Plug the crystal end of the Ethernet cable (RJ-45) into the printer's Ethernet interface, and then, plug the other end into the LAN's entrance. (Shown as figure 2-6)

Note: The detailed information of the network settings, please refer to the User's Manual.

2.4 Connecting the Power Cord

- 1. Make sure the printer is turned off. (The pressed down side on the power switch with O mark denotes the printer is off).
- 2. Make sure the voltage of the electrical outlet matches that of the AC adapter.
- 3. Plug the AC adapter to printer's power supply inlet.
- 4. Plug one end of the power cord into the AC adapter, and then plug the other end of the power cord into a properly grounded electrical outlet.

Figure 2-7 Connecting the power cord

- 2. Please use the electrical outlet connecting the ground properly.
- 3. Please use the original AC adapter only. Manufacturers have no responsibilities for the problems which are led by using unauthorized AC adapter.

2.5 Installing the Ribbon Cartridge

1. Make sure the printer is turned off.

Note: Don't replace the ribbon cartridge when the power is on, or else, the printer may start to work suddenly and you may get hurt.

- 2. Open the rear cover firstly, and then pull the projections on both sides of the front cover upwards to open the front cover forcibly.
- 3. Take out the ribbon cartridge, and then turn the ribbon knob in the direction shown by the arrow to tighten the ribbon.
- 4. Insert one side of the ribbon cartridge with the ribbon knob on the right, and then press down another side until the ribbon is locked in place.
- 5. Turn the ribbon knob in the direction shown by the arrow again to tighten the ribbon.
- 6. Close the rear cover and front cover and the installation is finished.

Figure 2-8 Installing the ribbon cartridge

Caution: Don't move the print head when the printer is powered on, or else, it may damage the printer. Moreover, don't touch the print head if the printer has just been used as the print head may be hot.

- Note: 1. When your print becomes faint, you need to replace the ribbon cartridge. Otherwise, the print quality will be affected and the print head may be damaged.
 - 2. To remove the old ribbon cartridge, firstly, make sure the power is turned off, then as the above figure shows, hold the ribbon cartridge with your thumb and middle finger, and then lift up the left side of the ribbon cartridge, and then take out the ribbon cartridge. Install a new one as the above steps.
 - 3. Please use the original ribbon cartridge only. Manufacturer will not honor warranty when using unauthorized ribbon cartridge.
 - 4. Please turn the ribbon knob in the direction as the arrow shows.

2.6 Installing the Driver

Please use the cable to connect computer with printer, then turn on the computer and the printer, put the driver CD into the CD-ROM. Install driver by the following ways:

2.6.1 Auto-installing Way (Recommended)

Double click the file "Setup.exe" in the driver disc, install driver by the prompt.

Note: Auto-install way needs the operating systems of Windows 2000 and above and the operating systems of Window 98/ME and below are not supported.

2.6.2 Hand-operated Installing Way

Note: This installing way is used for people who have some knowledge on hand-operated installing and equipment application.

2.6.2.1 The Operating Systems of Windows 2000/XP/Vista/Win7

(1) The hand-operated installing steps of parallel interface cable or serial interface cable:

In the following, Windows XP is taken as an example to show the installing steps. There are slight differences among different operating systems. The installing way with other operating systems depends on the practical installing process.

1 Click "Start" \rightarrow "Settings" \rightarrow "Select Printers".

- 2. Click "Add Printer", then a window of "Add Printer Wizard" pops up, click "Next", then please read the select guide carefully, for example: select "Local Printer" in the "Local or Network Printer" window, then click "Next".
- 3. A window of "Select a Printer Port" pops up, according to your requirement, select "LPT1: (Recommended Printer Port)" or serial interface, click "Next".
- 4. A window of "Install Printer Software" pops up, click "Have Disk ... ".
- 5. A window of "Install From Disk" pops up. Please according to the operating system environment, you should select the path as follows: CD-ROM → "Drivers" → "WIN2000 (XP-Vista-Win7)", click "Open", then click "OK" to return to the window of "Install Printer Software", click "Next".
- 6. Follow the guide and click "Next" gradually until the installation is finished.

(2) The hand-operated installing steps of USB interface cable:

In the following, Windows XP is taken as an example to show the installing steps. There are slight differences among different operating systems. The installing way with other operating systems depends on the practical installing process.

- 1. Connect with the USB cable and turn on both the computer and the printer. After the computer finds out new hardware, and a window of "Found New Hardware" pops up "Welcome to the new hardware wizard".
- 2. Select the "Install from the list or specific position", then click "Next"
- 3. A window of "Please choose your search and installation options" pops up, choose "Don't search, I will choose the driver to install", click "Next".
- 4. A window of "Add Printer Wizard" pops up, click "Have Disk...".
- 5. A window of "Install From Disk" pops up. Please according to the operating system environment, you should select the path as follows: CD-ROM → "Drivers" → "WIN2000 (XP-Vista-Win7)", click "Open", then click "OK" to return to the window of "Add Printer Wizard", click "Next".
- 6. Follow the guide and click "Next" gradually until the installation is finished.

2.6.2.2 The Operating System of Windows 8/Windows 10

The hand-operated installing steps of parallel interface, serial interface or USB interface cable:

- 1. Enter "Control Panel" \rightarrow "Device and Printers".
- 2. Click "Add Printer", then a window of "Add Printer" pops up, select "Add Local Printer Manually" in the "Local or Network Printer" window.
- 3. A window of "Select a Printer Port" pops up, according to your requirement, click "Use the Current Port", select "LPT1: (Printer Port)", serial interface or USB interface, click "Next".
- 4. A window of "Install Printer Driver" pops up, click "Have Disk...".
- 5. A window of "Install From Disk" pops up. Please according to the operating system environment, you should select the path as follows: CD-ROM → "Drivers" → "WIN8(WIN10)", click "Open", then click "OK" to return to the window of "Install Printer Driver", click "Next".
- 6. Follow the guide and click "Next" gradually until the installation is finished.

2.6.2.3 The Operating System of Windows 98

(1) The installing steps of a parallel interface cable or a serial interface cable:

1. Click "Start" \rightarrow "Settings" \rightarrow "Printers".

- 2. Double click "Add Printer", then a window of "Add Printer Wizard" pops up, select "Local Printer" in the "Local or Network Printer" window, then click "Next".
- 3. A window of "Click the manufacturer and model of your printer" pops up, click "Have Disk...", please click "Browse", select the path as follows: CD-ROM → "Drivers" → "WIN98 (WINME)", then click "OK".
- 4. A window of "Install From Disk" pops up, click "OK", return to a window of "Add Printer Wizard", then click "Next".
- 5. A window of "Printer Port" pops up, select "Available ports", according to your requirement, select "LPT1: (Recommended Printer Port)", or serial interface, click "Next", and then the printer's name will be shown. If the system has not installed other printer driver process, the printer is treated as default printer by the application process of Window98 environment, click "Next". Otherwise, according to prompt, choose the printer as default printer: "Yes", click "Next", choose "Yes-(recommended)", click "Finish". A window of "Printer test page completed" pops up, click "Yes".
- 6. The printer driver process is installed successfully.
- (2) The installing steps with the USB interface cable:
 - Note: 1. As the system of Windows 98/ME doesn't integrate USB driver control, please install USB driver before using USB interface printing. Then install USB printer driver.
 - 2. If it has installed the USB driver, please install the USB printer driver directly by the following steps.

USB driver installing steps:

- 1. Connect with the USB interface cable and turn on the printer.
- 2. After the computer finds out new hardware and finishes searching, a window of "Add New Hardware Wizard" pops up, click "Next".
- 3. A window of "Add New Hardware Wizard" "Windows Operation" pops up, choose "Search the best driver for the device (recommended)", and click "Next".
- 4. A window of "Add New Hardware Wizard" pops up, check "Specify a location (L)", click "Browse", select the path as follows: CD-ROM → "Drivers"→"WIN98 (WINME)" →"USBdriver", then click "OK".
- 5. Return to the window of "Add New Hardware Wizard", click "Next"; a window of "Windows driver file search for the device" pops up, click "Next".
- 6. After the system finishing installing the file automatically, a window of "USB Printer Supported" pops up, click "Finish".
- 7. The printer USB driver process is installed successfully.

USB printer driver installing steps:

- 1. Click "Start" \rightarrow "Settings" \rightarrow "Printers".
- 2. Double click "Add Printer", then a window of "Add Printer Wizard" pops up, click "Next".
- 3. A window of "Click the manufacturer and model of your printer" pops up, click "Have Disk...", please click "Browse", select the path as follows: CD-ROM → "Drivers" → "WIN98 (WINME)", and then click "OK".
- 4. A window of "Install From Disk" pops up, click "OK", return to the window of "Add Printer Wizard", then click "Next".
- 5. A window of "Printer Port" pops up, select "Available ports", select "JMUSB", click "Next", and then the printer's name will be shown. If the system has not installed other printer driver process, the printer is treated as default printer by the application process of Window98 environment, click "Next". Otherwise, according to prompt, choose the printer is default: "Yes"; click "Next", choose

"Yes-(recommended)", click "Finish". A window of "Printer test page completed" pops up, click "Yes".

6. The printer driver process is installed successfully.

2.7 Selecting the Cutter

Please setup the driver following the setup description in the CD going along with the printer. What's more, you can use the TM-T88II, TM-T88III series driver from EPSON.

If you want to cut the paper after printing, please select the "Full cut" or "Partial cut" in the Paper/Quality page after clicking the "Printing Preferences" button, which lies in the "General" page of the driver properties. Referring figure is shown below.

Note: if paper cut effect is the same whichever you select "full cut" or "partial cut" in the driver properties, it means that the cutter (the printer equipped with) can only carry out one kind of cut-methods.

2.8 Installing Bluetooth Interface Driver

Note: Select to install this driver according to the chosen model.

- 1. Choose the appropriate Bluetooth adapter, the operation system is Window XP or above which is with Bluetooth adapter driver.
- 2. Turn on the printer, search Bluetooth device in Window XP system, and click "Add".

Bluetooth Devices	×

<u> < B</u>	ack Next > Cancel

6. Record the Outgoing COM port and click "Finish", then reboot the computer.

7. Set the printer driver print port as the outgoing port and the installation is finished.

Note: Every Bluetooth device has its own address. Please reinstall it when replacing the Bluetooth device.

2.9 Network Settings

Please use EC network setting software NetFinder to set the IP address for EC Ethernet interface network printers, which can be found in the CD or downloaded from <u>http://www.eclinepos.com</u>.

Note: The network printing function needs the operation systems of Windows2000 and above and the operation systems of Windows98/ME and below are not supported.

2.9.1 Connecting Printer

Power on the printer, connect with the Ethernet cable which has been connected to LAN, and look into the information of Ethernet LED indicator to ensure the printer has entered into the normal connection.

Orange LED	Green LED	Description
ON	Blink	Connecting to network
OFF	OFF	Not connecting to network

2.9.2 Setting IP Address

1. Run NetFinder software

Double click NetFinder.exe in the PC which connects the printer in the same LAN. The figure of the software is shown as follows:

Button description:

Exit — Exit from the software

Search — Search printers in the same LAN

Assign IP — Modify the IP address and other settings for the specified printer.

2. Search printer

Click "Search" button in the main interface, the dialog box appearing will begin searching automatically and displays the status, listing a printer in the main interface if found. The time is counting down in the progress bar (10s in total) and the search will finish as soon as the time is over. If you need to go on searching, press "Search" button again.

	NetFinder	
(MODEL) {DESCRIPTION}	IP Address: 192.168.0.240 [Static] MAC Address: 20-2C-B7-00-3F-03	Exit
Search		X
	time left 6 second(s)	
found 1 device(s)	☐ Reload Timer ☑ Close this window when searching corr	npletes
	Stop	OK

If the printer connects correctly, the IP address can be found in a search period.

If the printer still can not be found out when the network connection is correct in the same network, Please check whether the network fire wall on the PC is open or not. If there is fire wall, please close it temporarily, open again after finishing searching and setting a printer completely.

3. Setting printer's IP address

The printer's information is listed in the main interface, the left side of which is the model and description and the right is the IP and MAC address. What's more, the assign mode (dynamic/static) is noted behind the IP address.

Exit Search Assign IP

1) Correlative description for IP address settings

In order to search and set printer's IP address conveniently for the first time, the factory default setting is DHCP mode which assigns IP address dynamically. If there is no DHCP server in the connected LAN but printer is set to DHCP mode, then it will use the internal pre-set address (IP: 10.0.0.1, Subnet Mask: 255.255.255.0) automatically.

It is suggested that printer's IP is set to static in actual usage, which can cut down the time when

initializing the Ethernet interface as the printer is turned on and prevent IP conflicts (The dynamic address used in printer may conflict with another one). The network segment part of the IP address and Subnet Mask must be the same as those of PC connecting with a printer. For example, the address of working PC is 192.168.0.1/255.255.255.0 (IP/Subnet Mask), then which of printer should be set to 192.168.0.x/255.255.255.0 (x=2~254 and should avoid the occupied IP). It is not restricted for NetFinder to search printers in the same network but different segment parts (can not stride gateway). Please refer to corresponding information for relative glossary of IP address.

2) Setting printer's IP address

Select the printer information to be modified (black frame appears), click "Assign IP" button. Set the IP in the dialogue box appearing.

Assign IP Address		×
IP:	192 . 168 . 7 . 65	OK
Subnet Mask:	255 , 255 , 248 , 0	Default setting
Default Gateway:	255 . 255 . 255 . 255	
	V	Use DHCP
🔲 Reload Timer		
Close this wind	ow on success	
	10 seconds remaining	

Check the "Use DHCP" if you need to assign dynamic address, the settings above will be disabled automatically. Please make sure there is a DHCP server in the network, or the printer can not receive an effective IP address.

When to specify static address, uncheck "Use DHCP" and fill in "IP address", "Subnet Mask" and "Default Gateway". If there is no gateway in the network, fill 255.255.255.255 in the "Default gateway". "IP address" and "Subnet Mask" should obey the assigning rules of local LAN (Ethernet), please enquire the administrator of networks which the printer connects to for more details.

Click "OK" to send address setting information to the specified printer. Click "Cancel" if you abandon the modification.

Click "Search" in the main interface again to update printer information after modifying the printer's IP address and restarting the printer.

3) Record printer's IP address

Record the printer's IP address, which will be used in the section "Newly-install printer network driver" or "Upgrade-install printer network driver (setting driver's network port)".

2.10 Wi-Fi Setting of EC Printer

2.10.1 Connecting the Printer

EC-PM-530 is taken as an example to respectively describe the connection of Windows, Android and iOS operation systems. Please make the connection according to the operating guide of the current system, and skip to the next chapter "**Wi-Fi Parameters Description**" when the connection is successfully.

(1) Connecting to the equipment in Windows

Take Windows XP operating system as an example to show how to connect the printer with the equipment in Windows system.

- 1. Turn on the printer and make sure the printer is in normal working condition. Start the operation 30 seconds after the printer is on.
- 2. Right click "My Network Places", and then click "Properties" to find the "Local Area Connection 2". Double click it and the window of "Wireless Network Connection" pops up, select and double click the corresponding printer Wi-Fi name. The printer Wi-Fi default name is composed by "the printer model+6 numbers and letters" (as shown in Figure 1)

Figure 1

(2) Connecting to the equipment in Android

Take the mobile phone of Android 4.4 as an example to show how to connect the printer with the equipment in Android.

- 1. Turn on the printer and make sure the printer is in normal working condition. Start the operation 30 seconds after the printer is on.
- 2. Click "Settings" and the interface pops up. Select the "WLAN" function to "ON", then click the printer Wi-Fi searched by the mobile phone to connect. The printer Wi-Fi default name is composed by "the printer model+6 numbers and letters" (as shown in Figure 2).

Figure 2

(3) Connecting to the equipment in iOS

Take the mobile phone of iOS 8.1 as an example to show how to connect the printer with the equipment in iOS.

- 1. Turn on the printer; make sure the printer is in normal working condition. Start the operation 30 seconds after the printer is on.
- 2. Click "Settings" and the interface pops up. Select the "WLAN" function to "ON", then click the printer Wi-Fi searched by the mobile phone to connect. The printer Wi-Fi default name is composed by "the printer model+6 numbers and letters" (as shown in Figure 3).

2.10.2 Wi-Fi Parameters Description

After connecting the equipment with the printer through wireless network, please import <u>http://10.10.10.1</u> in the browser address bar and enter, then the setting interface pops up. The display style of setting interface may differ in different systems, but the parameter items are the same. Take Windows XP as an example in the following, as shown in Figure 4.

(1) Printer-equipment connected printing

Printer-equipment connected printing is a way of printing which uses printer as the hotspot and connects the wireless equipment for printing.

"Wireless Settings" is the relevant setting parameter when the printer is as the hotspot (as shown in Figure 6). In the printer-equipment connected printing mode, the parameters of the wireless equipment must match that of the printer so as to make the communication successful. Please record the relevant parameters and fill them in the wireless equipment correctly.

After you finish resetting the parameters in the setting column, click "Apply" on the upper side of "Update Firmware". Then the countdown interface of saving the modification appears and the wireless equipment can conduct communications with the printer as soon as the countdown is over.

Wireless Settings		
BSSID	CC:D2:9B:00:00:52	
Network Name(SSID)	EC-PM-530_000052	
IP Address	10.10.10.1	
Subnet Mask	255.255.255.0	
Security Mode	Disable 🗸	
AP Client		
BSSID	CC:D2:9B:00:00:53

Location:	Browse	

Figure 6

Description in "Wireless Settings"

- **BSSID:** The address of the printer wireless card in the "Wireless Settings", which is the MAC address (Valid when it's in printer-equipment connected printing).
- **Network name (SSID):** The network name of the printer wireless card. You can modify it if necessary, but you have to connect the network again after modifying.
- **IP Address:** The IP address of the printer wireless card. You can modify it if necessary, but you need to enter the browser with the new IP after modifying.

Subnet Mask: The subnet mask of the printer wireless card. You can modify it if necessary.

Security Mode: The security mode of the printer wireless card. You can modify it if necessary.

If the connection between printer and computer is exceptional, please restart the printer or modify "Channel' in "AP Client".

(2) AP connected printing

AP connected printing is a way of printing which connects the printer with the wireless equipment by the outer hotspot.

"AP Client" (as shown in Figure 7) includes the setting parameters of AP connection. Please fill the information of current outer hotspot in the corresponding place. The parameters of the printer should match that of the current outer hotspot so as to make the communication successful. Please input them correctly.

AP Client		
BSSID	CC:D2:9B:00:00:53

Figure 7

Description in "AP Client"

- **BSSID:** The address of the printer wireless card in "AP Client", which is the MAC address. (Valid when it's in AP connected printing)
- **Channel:** Select the corresponding channel according to the hotspot setting (Automatic is recommended).

SSID: The Wi-Fi name of the current hotspot.

Security mode: Select the corresponding security mode according to the hotspot setting.

Encrypt type: Select the corresponding encrypt type according to the hotspot setting.

Acquiring and Setting the Security Mode and Encrypt Type

There are three ways to acquire security mode and encrypt type:

- (1) Get the security mode and encrypt type according to the corresponding network information given by the network administrator.
- (2) Find them by entering the router of hotspot with the administrator's account.
- (3) Find them through Windows operating system and the steps are shown below (Take WIN XP as an example):

① Right click "My Network Places", and click "Properties", then double click "Local Area Connection 2" (as shown in Figure 8).

② The dialog box "Wireless Network Connection Status" pops up, then click "Properties" (as shown in Figure 9).

^{((†))} Local Area Con	nection 2 Stat	us 🥐 🚺	<
General Support			
Connection			
Status:		Connected

The setting of Security Mode and Encrypt Type

Refer to "**Connecting the Printer**", connect the wireless equipment with the printer and select the parameters acquired by the above steps in the "Security Mode" and "Encrypt Type" of the "**AP Client**".

Pass Phrase: The password of the hotspot

Address Assignment: It includes "DHCP (Auto config)" and "Static (Assigned IP)". You can select the corresponding assignment way according to your need. When selecting "DHCP (Auto config)", the IP Address and Subnet Mask can be acquired automatically (Click "Apply" and the system will assign automatically), and there is no need to set manually (as shown in Figure 15).

	AP Client	
BSSID	CC:D2:9B:00:00:53	
Channel	1 💌	
SSID	WIFI001	8
Security Mode	WPA2PSK	
Encrypt Type	AES 💌	
Pass Phrase	•••••	
Address Assignment	DHCP (Auto config)	
IP Address	192.168.43.129	
Subnet Mask	255.255.255.0	1

Figure 15

Note: The green handshaking mark on the right side of the SSID column denotes the connection between the printer and the outer Wi-Fi hotspot is successful.

IP Address: Set the IP address of the printer wireless card and the IP address should be in the same segment with the wireless networks you are using.

Subnet mask: Set the subnet mask of the printer wireless card and the subnet mask should be the same with that of the wireless networks you are using.

Click "Apply" after all the parameters are set, then the countdown interface appears. When the time is over, disconnect the computer with the printer and connect the computer with the outer hotspot.

Update Firmware: Upgrade the wireless module of the printer (as shown in Figure 16), and you can neglect it if there is no need to upgrade.

Update Firmware		
Location:	Browse	
It takes about 1 minute to upload and upgrade flash and be patient please. Caution! A corrupted file will hang up the system.		
Apply		

Figure 16

2.10.3 Wi-Fi Interface Status Display and Parameters Reset

Wi-Fi interface is equipped with the "RESET button (Wi-Fi RESET)" and "LED indicator".

Turn on the printer, the Wi-Fi LED blinks fast, which denotes the interface is on the ON status. 30 EC Electronics, Ltd No. 221 Wai Yip Street, Kwun Tong FAX: (852) 3590 6497
seconds later, the Wi-Fi LED blinks slowly, which denotes the Wi-Fi interface is in normal working condition.

If user needs to restore the Wi-Fi parameters to factory default setting; just press the Wi-Fi RESET button to do it in a quick way. The method is as below:

- 1. Turn on the printer, wait for a few seconds until the Wi-Fi LED blinks slowly, and then press down the Wi-Fi RESET button for 2 seconds. Loosen the button and the LED blinks twice fast then blinks slowly again.
- 2. Reboot the printer and the factory default settings have been restored.

2.11 Mobile Equipment Wi-Fi Printing Function Application

The printer which is equipped with Wi-Fi interface supports the print service of Android system 4.4 or above version and the AirPrint wireless printing function of iPhone iOS system. After the Android mobile equipment has installed the print service plug-in, it can directly use the system print service to realize wireless printing; the iPhone iOS equipment does not need to install any plug-in.

Note: 1. Only if wireless printing function is supported by the APP can it be used.

2. The Android system must be 4.4 or above version and should have the complete Android Print function.

EC-PM-530 which is equipped with Wi-Fi interface is taken as an example to describe printing application. Network name (SSID) is "EC-PM-530", IP Address is 10.10.10.1, Subnet Mask is 255.255.255.0 and Security Mode is "Disable". Turn on the printer and then conduct the subsequent application steps. As shown in Figure 17.

Figure 17

2.11.1 The System Print Service Application of Android Equipment

As the Android system is relatively open, the equipment manufacturers can customize the special interface and function according to their need. The parameter setting way may be different because of the different interfaces.

1. Install the print service

Install AdrPrintSvc.apk, the "EC Print Service" will be added in the Android system.

2. Connect Wi-Fi printer

- 2.1 Enter into the "Settings" of system, as shown in Figure 18.
- 2.2 Find out the "WIRELESS & NETWORKS" in "Settings" interface, then click "Wi-Fi", as shown in Figure 19.

Figure 18

Figure 19

2.3 Select the "Wi-Fi" function to "ON", and select the "EC-PM-530" hotspot, as shown in Figure 20.

Figure 20

3. Turn on the print service

- 3.1 Enter into the "Settings" of the system, as shown in Figure 18.
- 3.2 Find out "Printing" in "Settings" interface and enter into, as shown in Figure 21.

3.3 Find out "EC Print Service" in "Printing" interface and enter into, as shown in Figure 22.

Figure 21

3.4 Switch the "EC Print Service" function from "OFF" to "ON", as shown in Figure 23.

Note: If there is no function switch in the upper right of "EC Print Service" interface, it means the current system has no complete Android Print function; it does not support the system print service.

3.5 After turning on the "EC Print Service", it will search automatically and show the printer if found, as shown in Figure 24.

4. Run APP

APP has to support the system's print service, WPS Office is taken as an example to describe.

- 4.1 Run the APP "WPS Office", as shown in Figure 25.
- 4.2 Open the document which is to be printed in the software, then click the "Tools" button, as shown in Figure 26.

Figure 25

4.3 When the menu pops up, select "Print", as shown in Figure 27.

4.4 When the "Print" interface pops up, click "Print", as shown in Figure 28.

Figure 27

Figure 28

- 4.5 When the "Select Print Service" interface pops up, select "System Print Service", as shown in Figure 29.
- 4.6 Select "EC-PM-530@10.10.10.1", as shown in Figure 30.

- 4.7 Make sure the printer and the corresponding printing parameters are correct, click "Print", as shown in Figure 31.
- 4.8 The system sends print data to the printer, when the printer finishes receiving, a prompt "Print job completed!" will be shown, as shown in Figure 32.

2.11.2 AirPrint Printing Application of iPhone iOS Equipment

iPhone iOS equipment used in this example is iPad Air2, iOS system version is 9.1. The application situation of other iOS equipment or system version may be different to this example.

1. Connect Wi-Fi printer

- 1.1 Enter into the "Settings" of the system, as shown in Figure 33.
- 1.2 Find out "WLAN" in "Settings" interface and enter into, as shown in Figure 34.

Figure 33

Figure 34

- 1.3 Turn on the "WLAN" function, equipment will search automatically and show the current hotspot, as shown in Figure 35.
- 1.4 Select the "EC-PM-530" hotspot, as shown in Figure 36.

2. Run APP

As the interface designs of APP are different, the operating way of printing function will also be different. "Word" is taken as an example to describe.

- 2.1 Install and run "Word", as shown in Figure 37.
- 2.2 Open the document which is to be printed, as shown in Figure 38.

Figure 37

2.3 Click the menu icon on the upper left of the "Word" software interface, as shown in Figure 39.2.4 When the menu pops up, click "Print", as shown in Figure 40.

Figure 40

2.5 When the "Printer Options" interface pops up, click "Select Printer", as shown in Figure 41.

2.6 Select "EC-PM-530" in the list, as shown in Figure 42.

Figure 42

2.7 Return to "Printer Options" interface and click "Print", the system sends print data to the printer, as shown in Figure 43.

Figure 43

2.12 Installing Printer Network Driver

The ways of installing network driver are divided into Newly-install way and Upgrade-install way according to whether the PC is installed the printer driver or not.

If the printer driver hasn't been installed on the PC, adopt newly-install way whose steps are shown in "Newly-install printer network driver".

If the printer driver has been installed on the PC, adopt Upgrade-install way whose steps are shown in "Upgrade-install printer network driver" (setting driver's network port).

1. Newly-install printer network driver

- 1) Click "Start" \rightarrow "Settings" \rightarrow "Select Printers".
- 2) Click "Add printer", then a window of "Add Printer Wizard" pops up, click "Next".
- 3) A window of "Add Printer Wizard" pops up, select "Local printer" in the "Local or Network Printer" window, and then click "Next".
- 4) A window of "Select the Printer port" pops up, select "Create a new port", and then select "Standard TCP/IP Port" in the port and click "Next".

- 9) Return to "Additional Port Information Required", click "Next".
- 10) A window of "Completing the Add Standard TCP/IP Printer Port Wizard" pops up, click "Finish".
- 11) A window of "Install Printer Software" pops up, click "Have Disk".
- 12) A window of "Install From Disk" pops up. Please according to the operating system environment, such as in Windows 2000/XP/Vista/Win7 operating system you should select the path as follows: CD-ROM-"Drivers"-"WIN2000 (XP-Vista-Win7)", click "Open", then click "OK" to return to the window of "Install Printer Software", click "Next".
- 13) Follow the guide and click "Next" gradually till the installation is finished. At this time, printer network driver is installed completely.

2. Upgrade-install printer network driver (setting driver's network port)

If PC has installed the printer's driver, set driver's network port to carry out network printing. The concrete steps are shown below:

- 1) Click "Start" \rightarrow "Settings", select "Printers".
- 2) Right click EC-PM-530B driver, click "Properties" on the window popping up.
- 3) A window of "Properties" pops up; click "Ports" and "Add Ports".

Chapter 3 Control Panel

3.1 Control Panel

There are three indicator LEDs and one key on the control panel as shown in Figure 3-1.

Figure 3-1 Control panel

3.1.1 Indicator LED

LED	Off	On	Blink
POWER	Power off	Power on	
ERROR	Normal status	Error occurs	Print head is too hot and enters the protection mode.
PAPER OUT	Paper in	Paper out	

3.1.2 Function Keys

While pressing the **FEED** key and holding on, turn on the printer at the same time. Loosen the **FEED** key according to beeping times, and the printer will perform the following functions correspondingly.

Beeping times	Description
One beep	Self-test
Two beeps	Pin test
Three beeps	Alignment adjustment
Four beeps	Hex dump mode
Five beeps	Initialize the printer
Six beeps	Aging test

Note: When there is paper in the printer, every time the FEED key is pressed (less than 0.5 second), paper will feed one line. If you press and hold the key, the paper will feed one page (default length is 10 inches).

3.2 Self Test and Parameter Settings

3.2.1 Function Mode Setting

Self-Test Mode

While pressing the **FEED** key and holding on, turn on the printer. The printer would beep once, then loosen the key, the printer would enter self-test mode.

Pin Test

While pressing the **FEED** button and holding on, turn on the printer. The printer beeps twice, and then you should loosen the **FEED** button. The printer will enter the pin test mode.

Alignment Adjust Mode

While pressing the **FEED** button and holding on, turn on the printer. The printer beeps three times, and then you should loosen the **FEED** button. The printer will enter the alignment adjust mode.

Each press on the **FEED** button will add 1 to the BID value. If you select BID 08, press **FEED** button for 8 times, and then press this button for a long time, the settings will be saved after the printer beeps twice, and the currently selected value will be printed at the same time. Turn off the printer; the new value will take effect after the printer is restarted.

Note: Alignment adjustment will affect print quality. You must think it over before adjusting and must operate it strictly according to the instruction.

■ Hex Dump Mode

While pressing the **FEED** button and holding on, turn on the printer. The printer beeps four times, and then you should loosen the **FEED** button. The printer will enter the Hexadecimal Printing Mode.

3.2.2 Parameter Settings

EC-PM-530B supports the function of parameter settings, which can be set in the PC with the driver installed in.

The concrete setting steps are shown as follows:

- 1. Make sure that the computer and the printer are connected with an USB cable and both the computer and the printer are turned on, the printer should be in normal working condition as well.
- 2. Under the operation system of WIN 2000/WIN XP/VISTA/WIN 7, Click "Start" \rightarrow "Settings" \rightarrow "Printers".

Under the operation system of Windows 8, click "Desktop" in the main panel firstly, and then double click and enter into the window of "Control panel", click "Hardware and Sound" to find "Devices and printers", and open the window of "Devices and printers".

- 3. Right click the driver of this printer in the window of "Printers", and then select "Properties".
- 4. Then a window of "Properties" pops up, click "Printer Settings" and open the window of "Printer Settings".

💕 EC Printer EC-PM-530B Prop	perties	? 🛛

6. When setting the parameter, please click the parameter icon firstly to open the parameter setting window. In the parameter setting window, there are parameter options, item explanation and control buttons. After selecting the corresponding parameter, click "Set", the printer will change the setting at the moment it receives the change command. Click "Cancel" to return to the upper window. Click "Default" to show the default setting of this item.

Stop Bits
The Parameter of picking : 1 BIT 2 BITS
Explanation : Set the printer serial data transmission stop bits.
Set Cancel Default

- 7. If you need to set several parameters, please refer to the previous point and set the parameters one by one.
- 8. After finishing setting, click "Set" to exit the "Properties" window.
- 9. Restart the printer and the new settings take effect.

3.2.3 Menu Terms Descriptions

Terms	Description
Black Mark	After selecting this function on, printer would carry out black mark detection instruction so as to make the vertical positioning printing precisely. (Bills or papers should have black mark on the printed side.)
Print Dir	Set the print direction: bidirectional or unidirectional
Form Width	Select the bill width.
Cutter	When the setting of the cutter is valid, the printer can execute the paper-cut instruction to cut paper.
Baud Rate	Select the printer serial data transfer rate.
Data Bits	Select the serial data bits.
Protocol	Select the control way of serial data transfer protocol as software control (XON/XOFF) or hardware control (DTR).
Parity	Select the parity bit for serial data transfer.
Stop Bits	Select the serial data transfer stop bit.
Partial Cut Set	Set the paper-cut width in the partial cut mode, the paper-cut width is bigger while the value is higher.

Chapter 4 Paper Loading

The printer can use the papers with the width of 76 ± 0.5 mm and 45 ± 0.5 mm/ 57.5 ± 0.5 mm, and it is easy to load paper. How to load paper will be introduced in this chapter.

1. Push the cover-open button to open the rear cover. If you want to use 45±0.5mm/57.5±0.5mm paper to print, you must install the roll paper guide.

2. Place the roll paper into the paper holder.

3. Pull out a small amount of paper and then close the rear cover.

condition			Temperature: -40 ~ 55°C		
	Storage environ	ment	Humidity:≤93%RH (40℃, No condensation)		
Weight	2.9 Kg		· · · · · · · · · · · · · · · · · · ·		
Noise	<65 dB (A) (ISO7779 standard)				
Control panel	1 key and 3 LED indicators				
Physical dimensions	162 mm (Width) × 253 mm (Depth) × 140 mm (Height)				
	1) Operating: 28	5 W; ② St	andby: Approximately 3.2 W		
Power consumption	Note: Only when the product is unconnected with outer power supply, can achieve zero energy consumption state.		roduct is unconnected with outer power supply, can it ergy consumption state.		
Certificate	CE, FCC				

Note: All the technical instructions in this user's manual are the laboratorial measurements which are achieved under national standard store and work environment (room temperature), the measuring paper accords with the specification in this user's manual.

5.2 Interface

This printer is equipped with one cash drawer interface and one data interface (you can select parallel interface, USB interface, USB interface, USB interface, USB interface + Ethernet interface, USB interface + Serial interface + Ethernet interface, USB interface + Bluetooth or Wi-Fi interface). Connect the computer with correct cables.

5.2.1 Cash Drawer Interface

(1) The cash drawer interface is RJ-11 interface (6 lines), shown as below.

Figure 5-1 Cash drawer interface

(2) Definition of pins

The definition of the cash drawer interface pins is shown as the Table below:

Pin NO.	Signal Name	Electric Characteristic	Signal Direction
1	Frame GND		
2	Cash drawer drive signal	24V(DC)/1A	Output
3	Cash drawer Open/closed signal	TTL	Input
4	24V (DC) Power		
5	NC		
6	Cash drawer Open/closed signal GND		
Drive cur	rent≤24V/1A		

Table A-1	Definition	of the	Cash drawer	Interface Pins
-----------	------------	--------	-------------	----------------

Note: Please use the proper cash drawer. Manufacturer will not honor warranty when using improper cash drawer.

5.2.2 Parallel Interface

(1) Technology specifications

- a) Select pulse: Pulse/STROBE is supplied by exterior.
- b) Signal exchange: /ACKNLG (answer) and BUSY.
- c) Logic electric level: All the input data and signal controlled by interface are compatible with TTL electric level.

(2) Linker

Parallel interface is 57-30360 (AMPHENOL), it is a 36PIN connector. The pin numbers of parallel interface connector are shown as Figure 5-2.

Figure 5-2 Pin numbers of the parallel interface connector

(3) Definition of pins (as shown in table A-2)

Table A-2 Pin definition of parallel interface connector

Pin	Return	Signa	al name	Direction	Description
1	19	/STROBE	Data selected	IN	Width of selected pulse is 0.5µ sec.
2	20	DATA1	Date bit 1	IN / OUT	
3	21	DATA2	Date bit 2	IN / OUT	
4	22	DATA3	Date bit 3	IN / OUT	
5	23	DATA4	Date bit 4	IN / OUT	Represent 8 bits of parallel data signal.
6	24	DATA5	Date bit 5	IN / OUT	means logical "0"
7	25	DATA6	Date bit 6	IN / OUT	
8	26	DATA7	Date bit 7	IN / OUT	
9	27	DATA8	Date bit 8	IN / OUT	
10	28	/ACK	Answer out	OUT	Pulse width is about 12µ sec. Low level means that data is received and the printer is ready to receive more data.
11	29	BUSY	BUSY Printer state		Outputting high level means that printer is too busy to receive data. This pin outputs high level under the following conditions: 1. When data is being imported; 2. When the printer is printing; 3. When the printer is offline; 4. When error occurs.
12	30	PE	Paper out	OUT	High level means paper out.
13		SLCT	Printer is selected	OUT	Pull up to 5V by the $3.3K\Omega$ resistor.
14		/AUTOFEED	Auto feed	IN	At low level, the printer will change to the next line automatically after printing one line.
15		NC	Empty pin		This pin is empty.
16		GND	Logical ground		Logical ground
17		CHASSIS	Structure ground		It is structure ground of printer, and it is separated from logical ground.
18		NC	Empty pin		This pin is empty.
19~30		GND	Ground		Loop ground that is twisted with signal wire.
31	16	/INIT	Initialization of printer	IN	Low level means the printer is initialized
32		/ERROR	Error occurs in printer.	OUT	When the printer is in state of paper out, offline mode or error, this signal level becomes low.
33		GND	Ground		Same with 19~30 pins.
34		NC	Empty pin		This pin is empty.

35	+5V	+5V supply	OUT	Pull up to 5V by the $3.3K\Omega$ resistor.
36	/SLCTIN	Printer is selected and answered.	IN	Only when this signal level is low, can the data be put into the printer.

- * The "Direction" in the title column means the flow direction of printer signal to the printer.
- * The "Return" in the title column means pair-twist return. You must confirm that the interface cable is a pair-twist shielding line, and every signal line is looped with ground line and pair-twisted together. Shielding line should be connected with the frame ground of host computer and printer.
- * All the interface state is based on TTL level. The rising and falling time of signal must be less than 0.2 ms.
- * The data transfer must comply with the specification of ACKING or Busy signal. Only when the level of ACKING or Busy signal is low can data be transferred.
- (4) Time sequence of Parallel to transmit data (as shown by Figure 5-3):

Figure 5-3 Time sequence of parallel to transmit data

5.2.3 USB Interface

1. The USB interface is a USB-B type connector (as shown by Figure 5-4):

USB2.0 (Full-Speed) interface connector A and B's signal wire assignment is shown as the following table:

Contact Number	Signal Name	Color
1	VBUS	Red
2	D-	White
3	D+	Green
4	GND	Black

Figure 5-4 USB-B type connector

2. The connection figure of printer and computer with USB interface (as shown in Figure 5-5).

Figure 5-5 Connection figure of printer and computer with USB interface

USB Interface is 2.0 Full-Speed interface, and displayed as a USB port on the computer finally. User can carry out USB printing by selecting corresponding USB port.

5.2.4 Serial Interface

EC-PM-530B printer's serial interface is compatible with RS-232C protocol, supporting RTS/CTS and XON/XOFF handshaking protocol. Its connector is a DB-9 type connector and pin number of serial interface connector is shown as below.

Figure 5-6 Pin number of serial interface connector

Signal definition of each pin is shown as Table A-3:

Pin Number	Signal	From	Description
2	RXD	Host	Printer receives data from Host
3	TXD	Printer	Printer sends control code X-ON/X-OFF and data to the Host
8	CTS	Printer	"MARK" state means printer is too busy to receive data; "SPACE" means printer is ready to receive data.
5	GND	_	Signal GND
4	DTR	Printer	Data terminal is ready

Table A-3 Signal of the serial interface pin

Note: ① "From" means the source where signal comes out. ② The logical level of signal is EIA level.

The default settings of baud rate and data configuration in serial connecting way are 9600bps, 8 bits, parity check disabled and 1 stop bit.

EC-PM-530B printer's serial interface can be connected with the standard RS-232C interface. When connecting with a PC, the connecting picture is shown as Figure 5-7. While connecting with an IBM PC or a compatible PC, you can connect the cable as shown in Figure 5-8.

The connection of serial interface:

Printer 9-Pin connector

Host 9-Pin connector

Figure 5-7 The connection figure of host 9 PIN and printer

Printer 9PIN connector

Host 25PIN connector

Figure 5-8 The connection figure of host 25 PIN and printer

5.2.5 Ethernet Interface

10/100Base-T Ethernet interface can connect to 10/100M Ethernet.

Figure 5-9 Ethernet interface

5.2.6 Power Supply Inlet

EC-PM-530B printer connects with AC adapter of $24V\pm10\%$ and 2.5A. The power supply inlet is shown as Figure 5-10.

Figure 5-10 Power supply inlet

5.3 Auto-cutter Specification

EC-PM-530B is equipped with an auto-cutter assembly; its specification is shown as table A-4:

Table A-4 Auto-cutter Assembly Specification 14

Item	Specification
Paper width	80 mm (max.)
Paper thickness	0.065 ~ 0.14 mm
Cutting mode	full cut or partially cut leaving point (leaving 1 point, 2mm)
Operation voltage (V)	Motor: 24, detector: 3.3
Startup current (A)	0.8
Cutting speed (second/ cut period)	1S
Cutting frequency (cuts/minute)	20
Physical dimensions (length×width×height) (mm)	95×50×18

Chapter 6 Maintenance and Technical Service

6.1 Cleaning the Printer

Clean the paper scrap and other objects inside the printer periodically.

Cleaning periodically and the cleaning tool

Periodical cleaning: every 3 months or every 300 working hours once

Cleaning tool: dry cloth (please use soft cloth to clean metal parts.)

Cleaning the paper feed path and the parts under carriage

Wipe off paper scrap and clean dirt and dust.

Cleaning the carriage shaft

There is a layer of oil covering the carriage shaft, which guarantees the carriage runs smoothly. But the oil is easy to absorb dust, please clean the dust with soft cloth first, and then add proper amount of lube (NYE180 lube of NYE Company is recommended), move print head back and forth to make lube scattered evenly.

Note: 1. Turn off printer and pull out the power cord before cleaning.

- 2. While being used under dust circumstance, the carriage shaft may stack much dust, which may affect the print quality. Therefore, please shorten the cleaning period.
- 3. The temperature of print head and the surrounding part may be high after using. Please avoid cleaning it at the moment.

4. Don't use hard cloth or combustible solvent to clean the printer.

6.2 Problems and Solutions

(1) Turn on the printer, all LEDs are off, and printer has no action

Make sure that the printer is connected to the power, and check whether the two ends of the power cord are connected properly. If it still can not work, plug another electrical device into the outlet to check whether the outlet works properly.

(2) Self-test is normal, but online printing is disabled.

- ① Please make sure that the printer is connected with the computer correctly and the paper is already loaded.
- 2 If it still can't print in online mode, please replace the interface cable with a new one.

(3) Paper out

Phenomenon: PAPER OUT LED is on but printer cannot print; or when the printer stops working during printing, the PAPER OUT LED is on.

Reason: Paper out

Solution: Install the roll paper again.

(4) Print head overheating protection

Phenomenon: The print head moves, but prints nothing, ERROR LED blinks.

Reason: The temperature of the print head is too hot, and it enters the protection state.

Solution: Please wait patiently; the print head will work automatically after cooling.

(5) Print quality

① Phenomenon: The printer can't print at all.

Solution: 1. Check whether the ribbon cartridge is installed or not.

- 2. Make sure that the interface cable is connected correctly.
- ② Phenomenon: The printed characters are faint.
 - Solution: Remove the ribbon cartridge and turn the ribbon knob, then install it again. If the printed characters are still faint, please replace a new one.
- ③ Phenomenon: Only one character is printed in one line, or the spacing between characters is too large.

Solution: Initialize the printer and make it restore to factory default setting.

Method: Pressing the **FEED** key, and turn on the printer at the same time, when the printer beeps five times, loosen the **FEED** key, the printer is initialized automatically.

(6) Print character

Phenomenon: The printer can't print the appropriate characters.

Solution: Make sure the driver is installed correctly, and the character font set by the application is what you need.

6.3 Contact the Technical Service Centre

If malfunction occurs and you cannot solve the problem through the operation shown in 6.2, the components of the printer are damaged during using or you need to buy some consumables, please contact the authorized technical service centre.

Chapter 7 Command Code Summary

7.1 General

The EC-PM-530B printer's control commands are compatible with ESC/POS.

Explanation of every command contains format and description. "Format" parts give three kinds of command format, including ASCII Code, Decimal code and hexadecimal code. "Description" parts describe the function of command. These three kinds of command format are equivalent, and you can select one of them by your need.

The explanation format of each command is shown as following:

Command			Function
Format:	ASCII:	Shown in standard ASCII character serial	
	Decimal:	Shown in Decimal number serial	
	Hex:	Shown in Hex number serial	

Description: the function and using instruction of that command

7.2 Explanation of Command

HI			Horizontal tab
Format:	ASCII:	HT	
	Decimal:	9	
	Hex:	09	

[Description]

Move the print position to the next horizontal tab position.

If the current printing position exceeds the last horizontal tab position, the HT command will not be executed.

Horizontal tab positions are set by "ESC D" command.

LF		Print and line feed
Format: ASCII:	LF	
Decimal:	10	
Hex:	0A	

[Description]

Print one line data in the line editing buffer and feed one line based on the current line spacing.

If the line editing buffer is empty, then only feed one line based on the current line spacing without printing.

CR			Print and carriage return
Format:	ASCII:	CR	
	Decimal:	13	
	Hex:	0D	

[Description]

The printer prints one line data in the line editing buffer and the print head returns to the left position automatically.

FF		Print and change page
Format: ASCII:	FF	
Decimal:	12	
Hex:	0C	

[Description]

Print one line data in the line editing buffer and feed to the top of next page based on the current page length.

ESC SP				Set right-side character spacing
Format: ASCII:	ESC	SP	n	
Decimal:	27	32	n	
Hex:	1B	20	n	

[Description]

Set the right-side spacing of character to n times of half dot spacing (1/144 Inch).

n=0~32; Default n=0.

ESC !					Set character printing mode
Format:	ASCII:	ESC	!	n	
	Decimal:	27	33	n	
	Hex:	1B	21	n	

[Description]

"ESC ! n" is synthetic setting command for character printing mode, and is used for selecting size and underline of printed character. The bit definition of print parameter "n" is shown as follows:

Dit	Eurotion	Value			
ЫІ	Function	0	1		
0	Character font	7×7	5×7		
1	undefined				
2	undefined				
3	undefined				
4	Double-height	Canceled	Selected		
5	Double-width	Canceled	Selected		
6	undefined				
7	Underline	Canceled	Selected		

Default n=0. That means: 7×7 dot matrix, normal character size and no underline.

ESC %

Format: ASCII: ESC % n Decimal: 27 37 n Hex: 1B 25 n

[Description]

Parameter n is one byte, and only the lowest bit is valid.

When $n \leq ******1 > B$, the user-defined character set is selected.

When $n \le ******0 > B$, the inner character set is selected.

When 0≤n≤255, default n=0.

ESC &									Define user-defined characters
Format:	ASCII:	ES	C &	s	n	m	а	d1 d2db	
	Decimal:	27	38	s	n	m	а	d1 d2db	
	Hex:	1B	26	s	n	m	а	d1 d2db	

[Description]

This command is used for self-defining characters. The meaning of each parameter is shown as follows:

- s: The number of longitudinal byte. Here s=1, 2. When n=1, define 7×7 character. When n=2, define 7×9 or half-size character.
- n: Starting ASCII code of user-defined character set. $n \ge 32$.

Select/cancel user-defined character set

- m: Ending ASCII code of user-defined character set. m≤127. The number of user-defined characters is m-n+1, and the maximum number is 96. When user defines only 1 character, m=n.
- a: The byte number of user-defined characters.
- d1 d2...db: The data of user-defined characters. Every character has s×a bytes. m-n+1 characters altogether have (s×a) × (m-n+1) bytes (b=(s×a) × (m-n+1)).
 The user-defined characters after being defined will be valid all the time until they are defined again or the printer is turned off.

The format of each user-defined character data is shown as follows:

ESC *			Select bit-image mode
Format: ASCI	I: ESC * m n1 n2	[d] n1+256×n2	
Decima	l: 27 42 m n1 n2	[d] n1+256×n2	
Hex	: 1B 2A m n1 n2	[d] n1+256×n2	

[Description]

This command is used for setting dot matrix figure mode (m) and setting the transverse dots number (n1, n2) of dot matrix figure.

m=0, 1

0≤n1≤255, 0≤n2≤3, 0≤d≤255.

n1, n2 is hexadecimal figure with two bits. n1 is low byte and n2 is high byte. n1, n2 is used for denoting the transverse dots number of figure printed by "ESC *" command. This value should be within the number of maximum line-width dots.

When m=0, normal printing is selected, the maximum number of printing dots is 210.

When m=1, half-dot printing is selected, the maximum number of printing dots is 420. On this condition the adjacent dots cannot be "1" at the same time.

The definition of [d] is:

EC Electronics, Ltd No. 221 Wai Yip Street, Kwun Tong Kowloon, Hong Kong

n=0, turns off underline mode; n=1, turns on underline mode.

ESC 2					Set 1/6 inch line spacing
Format:	ASCII:	ESC	2		
	Decimal:	27	50		
	Hex:	1B	32		
[Descript	ion]				
Set the li	ne spacing	to 1/6 i	nch.		
F00 0					Oct - 14.4.4 in ch. line on a rine
ESC 3	ASCII	FSC	3	n	Set n/144 inch line spacing
r onnat.	Decimal:	27	5 51	n	
	Hex:	 1B	33	n	
Descript	ionl				
Set the li	ne snacina	to n/14	4 inch		
n=0~255	ne spacing	10 11/14	+ Inch	•	
Default: r	n=24				
Deladit. I	. 21.				
ESC <	4001	500			Print head returns to standby position
Format:	ASCII:	ESC	<		
	Decimal.	21 1 D	00 2C		
	nex.	ID	30		
[Descript	ion]				
This com	mand make	es the p	rint h	ead m	nove to the standby position.
ESC ?	n				Cancel user-defined characters
Format:	ASCII:	ESC	?	n	
	Decimal:	27	63	n	
	Hex:	1B	3F	n	
[Descript	ion]				
Cancel th restarted	ne user-def	ined cha	aracte	r "n".	This command function can be canceled only after the computer is
ESC @					Initialize printer
Format:	ASCII:	ESC	@		
	Decimal:	27	64		
	Hex:	1B	40		
Descript	ionl				
This com	mand is us	ed for i	nitializ	ina th	e printer, and its function is described as follows:
(1) Clear	ing the dat	a in the	print	buffer	and line-editing buffer.
(2) Resu	mina the d	efault va	alue.		
(3) Settir	ng the print	ina mod	le of C	Chines	se character.
(4) Delet	ing user-de	efined c	harac	ers.	
500 0	U	-			
ESC C		ESC	<u> </u>	~	Set the page length according to line spacing
Format:	ASUII:	E3U 27	67	n n	
		∠1 1D	10	n	
	nex.	ΙĎ	43	П	

[Description]

The command sets the length of detecting black mark in the meantime. If the black mark can't be detected

in this length, then it is considered that there is no black mark.

The page length set by this command (Max. 22 inches) = current line spacing* n.

ESC D						Set horizontal tab positions
Format:	ASCII:	ESC	D	n[k]	NUL	
	Decimal:	27	68	n[k]	0	
	Hex:	1B	44	n[k]	00	

[Description]

Set horizontal tab positions to n1, n2, ..., nK.

For $k=1\sim21$, and it can set 21 horizontal tab positions at most.

The absolute horizontal position of the first horizontal tab position is: n1 times of half-dot spacing;

The absolute horizontal position of the second horizontal tab position is: (n1+n2) times of half-dot spacing;

The absolute horizontal position of the third horizontal tab position is: (n1+n2+n3) times of half-dot spacing;

.....

The absolute horizontal position of the Kth horizontal tab position is: (n1+n2+n3+.....+nK) times of half-dot spacing;

Default value: n1=n2=.....=nK=10.

All the horizontal tab positions (ni) should be within the line width allowed by the printer, ni=1~80. When ni=80, it is equal to 40 7×7 or 7×9 dot matrix characters width, or equal to 20 16×15 Chinese characters width.

After executing "ESC D" command, changing the kind and size of characters will not affect tab positions already set. This can guarantee that tab is put in order when Chinese characters mix with common characters in one line, or when characters are magnified or shrinked.

NUL is put in the end means that this command is over.

ESC E					Set / Cancel boldface printing
Format:	ASCII:	ESC	Е	n	
	Decimal:	27	69	n	
	Hex:	1B	45	n	

[Description]

This command realizes boldface printing by printing twice in which 2nd printing shifts little rightwards from 1st printing.

• When n is 0, boldface printing is invalid.

• When n is 1, boldface printing is valid.

ESC G					Turn double-strike mode on/off
Format:	ASCII:	ESC	G	n	
	Decimal:	27	71	n	
	Hex:	1B	47	n	

[Description]

When double-strike mode is turned on, the same character will be printed twice in the same position.

• When n is 0, double-strike mode is turned off.

• When n is 1, double-strike mode is turned on.

ESC J					Print and feed paper
Format:	ASCII:	ESC	J	n	
	Decimal:	27	74	n	
	Hex:	1B	4A	n	

[Description]

Print the data in the print buffer and feed the paper by n/144 inch. If there is no content in buffer, the printer will feed paper directly without printing.

EC-PM-530B User's Manual

www.eclinepos.com

ESC K						Print and feed reversely
Format:	ASCII:	ESC	Κ	n		
	Decimal:	27	75	n		
	Hex:	1B	4B	n		
[Descripti	on]					
Print the	data in the	print bu	uffer a	and fee	ed the pa	aper by n*1/144 inch in the reverse direction.
n=0~48.						
ESC U						Turn unidirectional printing mode on/off
Format:	ASCII:	ESC	U	n		
	Decimal:	27	85	n		
	Hex:	1B	55	n		
[Descripti	on]					
Turn unid	lirectional p	print mo	de or	n or off	. n=0~25	55, only the lowest bit is valid.
When n≤	******1>B,	unidire	ction	al print	ing mode	e is set.
When n≤	******0>B,	bidirec	tiona	l printir	ng mode	is set.
Default n	=0.					
ESC c	4 n					Select paper sensor to stop printing
Format:	ASCII:	ESC	С	4	n	
	Decimal:	27	99	52	n	
	Hex:	1B	63	34	n	
[Descripti	on]					
Select the	e paper sei	nsor to a	stop	printing	when p	paper out is detected.
n=0~255.						
n=05H, s	elect the pa	aper se	nsor	to stop	printing	when paper out is detected.
n=0, whe	n paper ou	t is dete	ected	; printiı	ng is not	stopped, so that user can print the last bill to the page end.
Default n	=05H.					
ESC c	5 n					Enable/disable panel buttons
Format:	ASCII:	ESC	С	5 r	ı	
	Decimal:	27	99	53 r	า	
	Hex:	1B	63	35 r	า	
[Descripti	on]					
• When n	≤******0>E	3, all bu	ittons	are er	abled (D	Default).
• When n	≤******1>E	3, all bu	ttons	are di	sabled.	
ESC 4						Print and food a lines
Format:	ASCII:	ESC	d	n		Find and leed it lines
	Decimal:	27	100	n		
	Hex:	1B	64	n		
[Descripti	onl					
Print the	data in the	print bu	uffer a	and fee	d n lines	S.

							Transmit printer stat
Format:	ASCII:	ESC	v				
	Decimal:	27	118				
	Hex:	1B	76				
Descripti	onl						
This com	mand ie ef	fective b	w uein	a soriol	linterfac	e: the nri	nter will transmit the status of printer paper to
Upper COI Electronics, Ltd	nputer as	1 byte a	fter red	eiving	this com	imand. Th	he signification of this byte is:

UDDEF COMPUTEF as EC Electronics, Ltd No. 221 Wai Yip Street, Kwun Tong Kowloon, Hong Kong

When paper is out, bit2=1; When paper is in, bit2=0;

When black mark is effective, bit7=1 denotes that the current position is the black mark position; bit7=0 denotes that the current position is not the black mark position. If black mark is ineffective, this bit is undefined.

FS !					Select Chinese printing mode
Format:	ASCII:	FS	!	n	
	Decimal:	28	33	n	
	Hex:	1C	21	n	

[Description]

bit2 of n=0, double-width mode is disabled; bit2=1, double-width mode is enabled

bit3 of n=0, double-height mode is disabled; bit3=1, double-height mode is enabled

bit7 of n=0, underline is disabled; bit7=1, underline is enabled

Default n=0

FS &				Enter Chinese characters printing mode
Format:	ASCII:	FS	&	
	Decimal:	28	38	
	Hex:	1C	26	

[Description]

When the printer receives this command, after finishing current line printing, the printer will change to Chinese characters printing mode from next line.

Default mode is Chinese mode.

FS -					Set Chinese underline mode
Format:	ASCII:	FS	-	n	
	Decimal:	28	45	n	
	Hex:	1C	2D	n	

[Description]

When n=0, underline has no effect on Chinese characters;

When n=1, Chinese characters are set to single underline mode;

When n=2, Chinese characters are set to double underline mode, but the tab generated by "HT" command is invalid.

FS 2										Self-define Chinese characters
Format:	ASCII:	FS	2	a1	a2	d1	d2	d3	d32	
	Decimal:	28	50	248	a2	d1	d2	d3	d32	
	Hex:	1C	32	F8	a2	d1	d2	d3	d32	

[Description]

Define the user-defined Chinese characters.

a1=F8 (Hex); A1≤a2≤FE (Hex).

Chinese code has two bytes: a1 is the first byte and a2 is the second byte.

FS S						Set full-size Chinese characters spacing
Format:	ASCII:	FS	S	n1	n2	
	Decimal:	28	83	n1	n2	
	Hex:	1C	53	n1	n2	

[Description]

n1 defines left-side spacing and n2 defines right-side spacing. Half-size characters will be aligned automatically to ensure that the width of full-size character is twice that of half-size character.

Default: r	1=0, n2=2				
FS W					Turn quadruple-size mode on/off for Chinese character
Format:	ASCII:	FS	W	n	
	Decimal:	28	87	n	
	Hex:	1C	57	n	
[Descripti	ion]				
When n≤	******1>B,	quadr	uple-s	ize moo	de is turned on.
When n≤	******0>B,	quadr	uple-s	ize moo	de is turned off.
<u>GS FF</u>					Executes black mark detecting
Format:	ASCII:	GS	FF		
	Decimal:	29	12		

[Description]

Execute black mark detecting. If black mark is detected, the printer stops feeding paper and returns a value (AAH) by serial interface; If black mark is not detected, the printer feeds paper till the end of this page and returns a value (55H) by serial interface.

GS (Α								Test command
Format:	ASCII:	GS	(А	рL	pН	n	m	
	Decimal:	29	40	65	pL	pН	n	m	
	Hex:	1D	28	41	рL	pН	n	m	

[Description]

pL=2, pH=0, n=0, m=1, 49

Enter HEX print mode (HEX DUMP)

1D

Hex:

0C

To cancel this command, you must restart the printer.

GS (F									Set offset of black mark orientation
Format:	ASCII:	GS	(F	рL	pН	а	m	nL	nH
	Decimal:	29	40	70	pL	pН	а	m	nL	nH
	Hex:	1D	28	46	pL	pН	а	m	nL	nH

[Description]

The parameters set by this command will be valid even after the printer is restarted.

This command is used for selecting permission of black mark orientation control and used for setting the beginning print-position offset or cutting/tearing position offset from black mark. This value is calculated by dots number.

The parameters of this command are shown as follows:

pL+ (pH×256) =4, that is: pL=4, pH=0

1≤a≤3,

m=0, 48

0≤ (nL+nH×256) < 1700

• a: set the different offset

а	function
1	Set the beginning print-position offset from the black mark detecting position
2	Set the cutting/tearing position offset from the black mark detecting position
3	Set the beginning print-position offset from the cutter position

- m=0 or m=48, calculate the offset in the feed direction;
- The actual distance of offset (set by nL, nH) is (nL+nH×256)×0.176mm; when a=3, 0≤nL≤246; nH=0.
- nL=nH=0, that is, when the black mark is detected, the current print head's position on the bill is the beginning print-position that is set, and the cutting/tearing position of the current bill is the cutting/tearing position that is set.
- Calculation explanation for the cutting/tearing position offset and the beginning print-position offset is shown as follows:
 - 1. When the distance L between the cutting/tearing position and the black mark position is the same with the inherent mechanical value L_0 of the printer, and the distance Q between the cutting/tearing position and the beginning print-position is the same with the inherent mechanical value Q_0 of the printer (shown as figure 7-2), all the offset value set by "GS (F" command is 0.

2. (1) When the distance L between the cutting/tearing position and the black mark position is less than the inherent mechanical value L_0 of the printer (shown as figure 7-3), the calculation of cutting/tearing position offset is shown as follows:

cutting/tearing position offset=(L₀-L)/0.176 (dots number).

(2) When the distance L between the cutting/tearing position and the black mark position is greater than the inherent mechanical value L₀ of the printer (shown as figure 7-4), the calculation of cutting/tearing position offset is shown as follows:

cutting/tearing position offset=(L_0 + distance of adjacent two black marks –L)/0.176 (dots number)

Figure 7-4

3. When the cutting/tearing position offset is not zero, or the distance Q between the beginning print-position and the cutting/tearing position is greater than the inherent mechanical value Q₀ of the printer (shown as figure 7-5), the calculation of the beginning print-position offset of "GS (F" command is shown as follows:

beginning print-position offset=(Q- Q₀)/0.176+ cutting/tearing position offset

Note: When setting the beginning print-position offset, the parameter "a" of "GS (F" command should be "1".

4. The inherent mechanical value of the printer: $L_0=A$ (mm) $Q_0=C$ (mm) (shown as figure 7-1).

Examples for the black mark orientation control command of specified bill (Take D model as an example):

The examples below assume that the paper tear position is on the printer tearing part, L_0 = 67mm, Q_0 = 29mm (as Figure 1 shows).

[Example 1] Bill requirement: Cutting/tearing position is on the preprint black mark position, and beginning print-position of every bill is 32mm from the cutting /tearing position.

- Calculating the cutting /tearing position offset
 As the black mark is on the cutting /tearing position, L=0, therefore, cutting /tearing position offset = (67-0)/0.176=381 points.
- Using the following command to set the cutting /tearing position offset
 1D 28 46 <4> <0> <2> <0> <7D> <1>
- Calculating the beginning print-position offset (32-29) /0.176+381=364 points
- Using the following command to set the beginning print-position offset
 1D 28 46 <4> <0> <1> <0> <6C> <1>
- After finishing the above setting, when printing every bill:

Use GS FF command to feed paper to beginning print-position;

Send the print data of every bill and print out the data line by line;

Use GS V m command to feed paper to cutting /tearing position, and then cut /tear off the bill.

[Example 2] Bill requirement: Cutting /tearing position is 8mm from the black mark position, and the beginning print-position is 16mm from the cutting/tearing position.

• Calculating the cutting /tearing position offset

As the distance between the black mark and the cutting /tearing position is less than L_0 (67mm), therefore, cutting /tearing position offset = (67-8)/0.176=335 points.

- Using the following command to set the cutting /tearing position offset
 1D 28 46 <4> <0> <2> <0> <4F> <1>
- Calculating the beginning print-position offset (16-29)/0.176+335=261 points
- Using the following command to set the beginning print-position offset
 1D 28 46 <4> <0> <1> <0> <5> <1>
- After finishing the above setting, when printing every bill: Use GS FF command to feed paper to beginning print-position; Send the print data of every bill and print out the data line by line; Use GS V m command to feed paper to cutting/tearing position, and then cut/tear off the bill.

[Example 3] Bill requirement: Bill length is 150mm, cutting /tearing position is 142mm from the black mark position, and beginning print-position is 32mm from the cutting/tearing position.

• Calculating the cutting /tearing position offset

As the distance between the black mark and the cutting/tearing position is greater than L_0 (67mm), therefore, cutting /tearing position offset = (67+150-142)/0.176=426 points.

• Using the following command to set the cutting /tearing position offset

1D 28 46 <4> <0> <2> <0> <AA> <1>

- Calculating the beginning print-position offset (32-29)/0.176+426=443 points
- Using the following command to set the beginning print-position offset

1D 28 46 <4> <0> <1> <0> <BB> <1>

• After finishing the above setting, using the same command as example 1 and example 2 when printing every bill.

Note:	1. As long as the cutting/tearing position offset isn't 0, use GS (F command to set
	the cutting/tearing position offset (a=2) and beginning print-position offset (a=1)
	respectively.

- 2. Only after setting the beginning print-position could use the GS FF command to feed paper to the beginning print-position, or else, it may detect the wrong position or feed paper one page without printing anything.
- 3. After using GS (F command to change the previous offset, it may detect the wrong position or feed paper one page without printing anything in the first bill printing, but it will be correct in the following bill printing.

<u>GS</u> r					Transmit printer status
Format:	ASCII:	GS	r	n	
	Decimal:	29	114	n	
	Hex:	1D	72	n	

[Description]

This command is effective at serial interface.

If n=1 or n=49, paper status is returned. If there is paper, the bit2, 3 of the returned byte is 0; if there is no

paper, the bit 2, 3 of the returned byte is 1.

GS V						Feed paper to cutting position
Format:	ASCII:	GS	V	m	n	
	Decimal:	29	86	m	n	
	Hex:	1D	56	m	n	

[Description]

m=66, 0≤n≤255

When m=66, paper is fed to the position (cutting position + n*1/144 inch) and paper is cut partially (only valid with auto-cutter type). But if the black mark orientation is effective, the value of n is ineffective. The distance of paper feed is decided by the command of "GS (F".

Format:	ASCII:	GS	V	m			
	Decimal:	29	86	m			
	Hex:	1D	56	m			

[Description]

When m=1 or m=49, paper is fed to the cutting position and is cut partially (only valid with auto-cutter type).

ESC r n Select the ribbon Format: ASCII: ESC r n Decimal: 27 114 n Hex: 1B 72 n

[Description]

When parameter n=0, select to print in black.

When parameter n=1, select to print in red.

Note: This command is only for the black & red double colors ribbon.

ESC t n				Select the codepage
Format: ASCII:	ESC	; t	n	
Decimal:	27	116	n	
Hex:	1B	74	n	

[Description]

Select the default codepage.

Appendix Commands List

Command (ASCII)	Hexadecimal Code	Function				
нт	09	Moves the print position to the next horizontal tab position.				
LF	0A	Print the data in the line editing buffer and feed one line				
CR	0D	The printer prints one line data and the print head returns to the left position automatically.				
FF	0C	Print and feed paper to the top of the next page according to the current page length setting				
ESC SP	1B 20 n	Set the right-side spacing of character to n times of half dot spacing (1/144 Inch).				
ESC !	1B 21 n	Set character printing mode				
ESC %	1b 25 n	Select/cancel user-defined character set				
ESC &	1B 26 s n m a d1dn	Define user-defined characters				
ESC *	1B 2A m n1 n2	Select bit-image mode				
ESC -	1B 2D n	Set English underline mode				
ESC 2	1B 32	Set 1/6 inch line spacing				
ESC 3	1B 33 n	Set n/144 inch line spacing				
ESC <	1B 3C	Print head returns to standby position				
		Cancel user-defined character "n"				
ESC ? n	1B 3F n	Note: You should restart the printer to cancel this command.				
ESC @	1B 40	Initialize printer				
ESC C	1B 43 n	Set the page length according to line spacing				
ESC D	1B 44 n1 nk NULL	Set horizontal tab positions				
ESC E	1B 45 n	Set / Cancel boldface printing				
ESC G	1B 47 n	Turn double-strike mode on/off				
ESC J	1B 4A n	Print and feed paper in n/144 inch, if there is no data in the buffer, it may feed paper directly.				
ESC K	1B 4B n	Print and reversely feed in n/144 inch, n = $0 \sim 48$.				
ESC U	1B 55 n	Turn unidirectional printing mode on/off				
ESC c 4 n	1B 63 34	Select paper sensor (s) to stop printing				
ESC c 5 n	1B 63 35	Enable/disable panel buttons				
ESC d n	1B 64 n	Print and feed n lines. n = 0 ~ 255.				
ESC e n	1B 65 n	Print and reversely feed n lines. $n = 0 \sim 2$. And the maximum reverse paper feed distance is 48 points (48*0.176mm).				
		Note: Reverse paper feed should not over 2 lines.				

ESC i	1B 69	Full cut				
ESC j n	1B 6A n	Print and reversely feed n/144 inch, if there is no data in the buffer, it may feed paper directly, n=0~48.				
ESC m	1B 6D	Partial cut				
ESC p m t1 t2	1B 70	Generate cash drawer drive pulse				
ESC v	1B 76	Transmit printer status				
FS !	1C 21 n	Select Chinese printing mode				
FS &	1C 26	Enter Chinese characters printing mode				
FS -	1C 2D n	Set Chinese underline mode				
FS 2	1C 32	Self-define Chinese characters				
FS S	1C 53 n1 n2	Set full-size Chinese characters spacing				
FS W	1C 57 n	Turn quadruple-size mode on/off for Chinese characters				
GS FF	1D 0C	Black mark detection				
	10 20 41 51 54	Enter the Hex print mode (HEX DUMP). pL=2, pH=0, n=0, m=1, 49				
pH n m	n m	Note: You should restart the printer to cancel using this command.				
GS (FpL pHamnLnH	1D 28 46 pL pH a m nL nH	Set offset of black mark. pL=4, pH=0, a=0~3, m=0,48 0≤(nL+nH×256)< 1700				
GS r	1D 72 n	Transmit printer status				
GS V m n	1D 56 m n	Feed paper to cutting position.				
ESC r n	1B 72 n	Select the ribbon				
ESC t n	1B 74 n	Select the codepage.				

EC Electronics, Ltd.

Manufacturer: EC LINE

Thank you very much for using EC Line product For service, please contact <u>service@ecline.com.hk</u>
